### Shrub Maintenance and Weed Control Program

1. Early Spring Plant Health and Weed Control (March & April): This application addresses plant nutrition, slows plant rapid spring flush of growth, and prevents many weeds before they happen. If hand weeding is necessary it will be addressed at this time. Spring provides an excellent time to mulch (\$75 per cubic yard) that will assist with weed control and water management through the summer
2. Early Summer Trimming and Weeding (May & June): This visit we will provide the first of two annual shrub trimmings. We will also address any emerged weeds, pulling them. During this visit we will inspect for disease and insect damage and advise clients of necessary measures.
3. Mid Summer Fertilizer and Grass Encroachment Control (July & Aug): This visit will focus on grass encroachment into landscape areas. A slow-release fertilizer will be applied to get the landscape through the remaining season along with a pre-emergent herbicide for weeds.
4. Early Fall Trimming and Inspection (Sept & Oct): During this visit we will inspect for any remaining weeds, along with fall trimming of the landscape. If desired this is a great time to freshen mulch (\$75 per cubic yard) in beds to protect from winter damage of plants.

At Leaf to Soil we always take pride in our work and strive to make every customer as proud of their landscape as we are of our services. Personal consultation is always available and we encourage feedback from our client as we strive to meet your every need.
