Irrigation Plus Sprinkler Management Program

1. Spring Start-Up and Nozzle Adjustments (April & May): This visit we will hook up backflow preventers adjust run times on timers and check all heads for proper adjustment. Any broken heads or malfunctioning components will be brought to the owner's attention at this time.
2. Summer Timer Adjustment (June & July): This visit we will inspect the lawn for wet and or dry spots and make the proper adjustments to accessible irrigation timers.
3. Late Summer Timer Adjustment (Aug & Sept): During the late summer conditions often get dry which may require additional time adjustments to your irrigation systems.
4. Winterization (Oct & Nov): During this visit we will winterize the irrigation system by removing the backflow preventer and blowing air into each water line in the ground to prevent winter freeze damage to the lines.

At Leaf to Soil we want to help save you money on your water bill by only watering when necessary and saving water to help our environment. We encourage installing rain sensors on irrigation timers and by using less water we not only save water we also reduce weed pressure on your lawn.
