### Lawn Mowing, Edging, Trimming, and Clean-Up Program

1. Spring scalping (March & April): This process cuts the turf at our lowest height setting. This will remove the old growth from the previous season and allow sunlight better access to the soil.
2. Summer maintenance (April to Oct): During each weekly visit we will mow, edge along all concrete, trim around trees and structures, and finish with cleaning up loose clippings.
3. Fall clean up (Nov & Dec): During the fall, leaf mulching will be done with mulching blades on the mower and leaves will be blown from landscape areas. If needed leaves may be collected and removed from property with blowers and vacuums.

At Leaf to Soil we strive to provide our clients with the most hassle free and aesthetically pleasing outdoor space to enjoy. Our customers often comment on our attention to detail and our willingness to please our clients.
